Summary

Software Engineer with 8 years of experience building scalable frontend platforms and enterprise web applications. Focused on React, Next.js, and TypeScript, with recent experience building AI-powered search interfaces and reusable component systems adopted across multiple consumer applications. Experienced in frontend architecture, technical discovery, and end-to-end feature delivery, collaborating across Product, Design, and Engineering teams to build high-traffic web experiences.

Experience

Wizeline

Remote, Mexico

Software Engineer III - DJ+ Search Team

Nov 2025 – Present

- Develop and integrate React-based interfaces for DJ+ Factiva's AI-powered search experiences, including Smart Summaries, conversational experiences, and deeper analysis flows, translating product requirements and designs into reusable frontend solutions.
- Own and evolve a growing library of 30+ composed components powering core search-result experiences, from advanced filtering, previews, and bulk selection to conversational AI and Smart Summary blocks. Adopted across at least three consumer applications, with contributions from additional engineering teams.
- Execute frontend delivery from requirements refinement and technical discovery through implementation and testing, while providing L3 technical support and handling cross-team feature and change requests.

Software Engineer III - WSJ Web Platform

Oct 2024 – Nov 2025

- Maintained and evolved the frontend platform powering [WSJ.com](https://www.wsj.com), working across Next.js layouts, routing, rendering and SSR, article pages, and frontend architecture for high-traffic editorial experiences.
- Maintained three shared packages within a 12–15 package frontend monorepo, including editorial component libraries and an internal NewsKit-based library, building reusable UI capabilities with React and Styled Components.
- Developed editorial experiences and dedicated WebViews integrated into WSJ's mobile applications, contributing to performance, Core Web Vitals, and SEO while collaborating with Product, Design, and Mobile Engineering teams.

DXC Luxoft

Remote, Mexico

Software Developer

Apr 2022 – Oct 2024

- Contributed to the frontend architecture of a micro-frontend application modernizing Lloyd's reinsurance transaction workflows, building complex Angular 15 components and multi-step forms with interconnected business rules across a 100+ property data model.
- Supported the Reinsurance TXN Platform team through code reviews, Angular technical guidance, and API integrations, helping deliver a functional MVP.
- Built the modernized customer-facing experience for Network of Giving with U.S.-based design consultancy Argodesign, and delivered a Supply Chain Risk Management MVP intended for commercial development within a limited timeline using React, Next.js, Leaflet, and MUI.

Bosch

Remote, Mexico

Junior Software Developer

Sep 2020 – Apr 2022

- Maintained and modernized Bosch's global IT Service Portal, a legacy Backbone.js application used by more than 400K Bosch associates worldwide, as well as external contractors. Developed new self-service and smart-search capabilities, and took a Socket.IO integration from feasibility assessment through POC to implementation for user activity tracking.
- Built ITSM DASH, a React-based support operations platform using Node.js for its Business Logic Layer and integrations with multiple SQL databases. Implemented smart search for support articles and ticket creation, helping support agents quickly find solutions and manage service requests from a unified interface.
- Provided Level 3 technical support for the IT Service Portal and ITSM DASH, collaborating with engineers, QA, and Product across Mexico and the U.S. on troubleshooting, maintenance, and new capabilities for globally used applications.

Adroit Overseas

Remote, Mexico

Frontend Developer

Nov 2019 – Sep 2020

- Led frontend development of a custom CRM evolving into an ERP platform, owning the web architecture, application flows, validations, and API integrations using Angular 7–9 and Angular Material. Supported multiple country branches with distinct workflows and user roles.
- Served as a technical reference, onboarding and mentoring developers as the team grew to four frontend and two backend developers.
- Developed Adroit Overseas' Corporate Website within a limited timeframe.

Aleate

Guadalajara, Mexico

Frontend Developer

Aug 2018 – Oct 2019

- Built ERP and CRM web applications using Angular, developing the frontend from the ground up with API integrations and Google Maps functionality.
- Proposed and developed Aleate's immersive 3D Corporate Website using JavaScript, Three.js, and WebGL.

Technical Skills

<> Frontend Development

React, Next.js, TypeScript, GraphQL, Apollo Client, Zustand, Redux, Angular

<> Platform Engineering

Shared UI Architecture, Component Libraries, Component API Design, Design Systems Implementation, Storybook

<> Performance & Quality

Core Web Vitals, Performance Optimization, React Testing Library, Code Documentation

<> Technical Collaboration

Technical Ownership, Technical Discovery, Cross-team Technical Support, Code Reviews

<> Backend & Data

Node.js, NestJS, REST APIs, PostgreSQL

Languages

English

B2 (Upper-Intermediate)

Spanish

Native

Education

Centro de Enseñanza Técnica Industrial (CETI)

Guadalajara, Mexico • 2014 – 2018

Professional Technologist in Software Development
